

# Table of Contents

**Foreword**

**Table of Contents**

**Acknowledgments**

**The Author**

**Chapter One. Introduction**

- 1.A. Frame of Reference
- 1.B. Definitions
- 1.C. Brief History
- 1.D. Reasons for Using Powders
- 1.E. Future Prospects
- 1.F. Suggested References
- 1.G. Study Questions

**Chapter Two. Powder Characterization**

- 2.A. Concepts
- 2.B. Powder Sampling
- 2.C. Particle Size Measurement
- 2.D. Particle Size Data
- 2.E. Problems in Particle Size Analysis
- 2.F. Particle Shape
- 2.G. Surface Area
- 2.H. Packing Density and Interparticle Friction
- 2.I. Compressibility
- 2.J. Powder Internal Structure
- 2.K. Chemical Characterization
- 2.L. Minimum Characterization Tests
- 2.M. Suggested References
- 2.N. Study Questions

**Chapter Three. Powder Fabrication**

- 3.A. Basic Approaches
- 3.B. Mechanical Fabrication Techniques
- 3.C. Electrolytic Fabrication Techniques
- 3.D. Chemical Fabrication Techniques
- 3.E. Atomization Techniques
- 3.F. Evaporation Techniques
- 3.G. Techniques for Nanoscale and Submicrometer Powders
- 3.H. Approaches to Forming Specific Powders
- 3.I. Suggested References
- 3.J. Study Questions

**Chapter Four. Microstructure Control in Powders**

- 4.A. Introduction
- 4.B. Microstructures of Powders
- 4.C. Composition Adjustments

- 4.D. Kinetics of Solidification in Powders
- 4.E. Applications of Rapid-Solidification-Rate Powder Products
- 4.F. Nanoscale Powders
- 4.G. Economics of Novel Powders
- 4.H. Summary Comments
- 4.I. Suggested References
- 4.J. Study Questions

### **Chapter Five. Tailoring Powders for Shaping and Consolidation**

- 5.A. Powder Handling
- 5.B. Particle Modifications
- 5.C. Particle Packing Modifications
- 5.D. Polymer Additives
- 5.E. Coated and Bonded Powders
- 5.F. Mixing and Blending
- 5.G. Pelletizing and Granulating
- 5.H. Summary Comments
- 5.I. Suggested References
- 5.J. Study Questions

### **Chapter Six. Powder Shaping**

- 6.A. Shaping Versus Compaction
- 6.B. Feature-Based Shaping Decisions
- 6.C. Binders and Shaping Conditions
- 6.D. Injection Molding
- 6.E. Extrusion
- 6.F. Slurry Techniques
- 6.G. Summary on Shaping Technologies
- 6.H. Suggested References
- 6.I. Study Questions

### **Chapter Seven. Powder Compaction**

- 7.A. Introduction and Observations
- 7.B. Particle Deformation in Compaction
- 7.C. Die Compaction Technology
- 7.D. Cold Isostatic Compaction
- 7.E. Computer Simulations
- 7.F. Designing for Compaction
- 7.G. Economics of Compaction
- 7.H. Summary on Powder Compaction
- 7.I. Suggested References
- 7.J. Study Questions

### **Chapter Eight. Sintering Concepts**

- 8.A. Sintering Fundamentals
- 8.B. Polymer Burnout
- 8.C. Solid-State Sintering Theory
- 8.D. Pore-Structure Evolution

- 8.E. Densification Versus Bonding Events
- 8.F. Green-Density Effects on Sintering
- 8.G. Mixed-Powder Sintering
- 8.H. Enhanced Sintering
- 8.I. Liquid Phase Sintering
- 8.J. Computer Simulations of Sintering
- 8.K. Summary of Sintering Concepts
- 8.L. Suggested References
- 8.M. Study Questions

### **Chapter Nine. Sintering Practice**

- 9.A. Requirements
- 9.B. Process Atmospheres
- 9.C. Polymer Burnout
- 9.D. Heat Sources and Heat Transfer
- 9.E. Process Measurement and Control
- 9.F. Substrates
- 9.G. Furnace Designs
- 9.H. Sintering Cycles
- 9.I. Operating Costs
- 9.J. Summary Comments
- 9.K. Suggested References
- 9.L. Study Questions

### **Chapter Ten. Full-Density Processes**

- 10.A. Introduction
- 10.B. Advantages of Full Density
- 10.C. Disadvantages of Full-Density Processing
- 10.D. Densification Fundamentals
- 10.E. Practical Approaches
- 10.F. Computer Simulations of Pressure-Assisted Densification
- 10.G. Summary Comments
- 10.H. Suggested References
- 10.I. Study Questions

### **Chapter Eleven. Freeform Fabrication**

- 11.A. Concept of Tool-Free Fabrication
- 11.B. Green Machining
- 11.C. Laminate Technologies
- 11.D. High-Power Laser
- 11.E. Spray Forming
- 11.F. Bonded Objects
- 11.G. Summary Comments
- 11.H. Suggested References
- 11.I. Study Questions

### **Chapter Twelve. Finishing Operations**

- 12.A. Introduction

- 12.B. Repressing, Coining, and Selective Densification
- 12.C. Machining and Grinding
- 12.D. Heat Treatment
- 12.E. Joining and Assembly
- 12.F. Coatings, Surface Treatments
- 12.G. Inspection
- 12.H. Summary Comments
- 12.I. Suggested References
- 12.J. Study Questions

### **Chapter Thirteen. Compact Characterization**

- 13.A. Microstructural Features
- 13.B. Pore Structure Characterization
- 13.C. Mechanical Properties
- 13.D. Surface-Related Properties
- 13.E. Electrical Properties
- 13.F. Thermal Properties
- 13.G. Magnetic Properties
- 13.H. Optical Properties
- 13.I. Summary Comments
- 13.J. Suggested References
- 13.K. Study Questions

### **Chapter Fourteen. Materials and Properties**

- 14.A. General Categorizations
- 14.B. Porosity Effects
- 14.C. Materials Selection
- 14.D. Structural Materials
- 14.E. Oxidation- and Corrosion-Resistant Materials
- 14.F. High-Hardness Materials
- 14.G. Low-Density Materials
- 14.H. High-Density, Inertial Materials
- 14.I. Electrical Materials
- 14.J. Magnetic Materials
- 14.K. Thermal Management Materials
- 14.L. Biocompatible Materials
- 14.M. Wear-Resistant Materials
- 14.N. Summary Comments
- 14.O. Suggested References
- 14.P. Study Questions

### **Chapter Fifteen. Design and Cost Guidelines**

- 15.A. Overview of Design Factors
- 15.B. Technical Rationalization
- 15.C. Cost Issues
- 15.D. Process Selection Guidelines
- 15.E. Product Design Guidelines

15.F. Suggested References

15.G. Study Questions

**Chapter Sixteen. Markets and Applications**

16.A. Markets for Sintered Materials

16.B. Example Applications

16.C. Growth Prospects

16.D. Summary

16.E. Suggested References

16.F. Study Questions

**Appendices**

A. Common Terms

B. Standards

C. Material Properties

D. Constants and Conversion Factors

E. Answers to Odd Numbered Study Questions

**Index**
