The MPIF Outstanding Technical Paper Award, renamed in honor of Howard I. Sanderow in 2009, was established in 1993 to recognize authors of manuscripts for excellence in scientific and technical written communications from those papers presented and submitted for publication from the annual technical conference organized by the Metal Powder Industries Federation and APMI International; to enhance the quality of technology transfer in the PM literature by increasing the professional level of papers submitted for the annual technical conference; and, to enhance and promote the science and technology which is fundamental to powder metallurgy products, processes and materials.

Eligibility for the award is open to authors of papers of original and unpublished work submitted and presented for publication in the proceedings of the conference or special proceedings. Transfer of copyright agreement is to be submitted with the original manuscript to MPIF. Eligible authors must follow established guidelines regarding manuscript preparation, review and submission in order for the paper to be considered for the award.

Paper excellence is measured using a system of four quality standards: (1) the paper is scientifically or technically new, innovative or is a constructive review; (2) has clear presentation in writing, organization, graphics and format and has professional integrity; (3) has clear industrial application and (4) has long-term value.
