Facts about COVID-19 in Montréal

✓ There have been 62 confirmed cases of the virus in Canada, with only 3 being in the province of Quebec
✓ The Public Health Agency of Canada (PHAC) continues assessed the public health risk associated with COVID-19 and determined it to be low for Canada.
✓ The PHAC is currently implementing several measures at the ten Canadian airports that will monitor the well-being of travelers arriving in Canada. Travelers going through these airports will see signage in French, English and Simplified Chinese, asking them to alert a border service officer should they have any flu-like symptoms
✓ At the Montréal-Trudeau International Airport, the PHAC has added an additional health screening question to the electronic border kiosks in the customs hall and the PHAC also has screening officers on-site
✓ The PHAC has set up an information kiosk at international arrivals to provide information to passengers and employees
✓ To support efforts to contain the virus, Air Canada has extended the suspension of its flights between Canada and Beijing and Shanghai until March 27, 2020
✓ Canadian government agencies and health authorities are following the situation closely and will adopt all WHO recommendations for preventive measures as circumstances evolve
✓ Montréal remains a safe and secure destination for all business and leisure travel

MPIF is implementing the below steps to ensure a safe and healthy event.
The safety and health of our attendees, exhibitors, students and guests that attend the WorldPM2020 conference is and will remain our top priority.

• MPIF is keeping a close pulse on the CDC, WHO and PHAC recommendations and updates as circumstances evolve
  o Harvard Medical School states that it is weaker than the flu.
• MPIF is planning preventive measures at the conference:
  o Hand sanitizer stations around the event venue, for your convenience
  o We will adopt a No Handshake Policy to reduce the spreading of germs
MPIF staff and convention center personnel will increase cleaning and disinfection practices across all high-volume touchpoints (catering areas, headtable/podiums, Conference Registration Center, handrails, entrance/exit doors, among others).

Other practices will be put into place as we continue to monitor the situation.

- In conjunction with the CDC, MPIF recommends that delegates follow everyday prevention practices:
  - Wash your hands with soap and water for at least 20 seconds, especially after using the bathroom, before eating, and after blowing your nose, coughing or sneezing.
  - If soap and water are not readily available, use alcohol-based hand sanitizer with at least 60% alcohol. Always wash hands with soap and water if hands are visibly dirty.
  - If at anytime during the conference you should show any symptoms of illness, please contact an emergency medical professional.
  - Avoid touching eyes, nose, and mouth.
  - Cover your cough or sneeze with a tissue, then throw the tissue in the trash.
  - Cleanse and disinfect frequently touched objects and surfaces.

MPIF will continue to keep delegates up-to-date on details.
